Dylan DeJesus
8/2/23

      This is my first time taking a class in the summer. It went fast but I never really felt rushed or overwhelmed. I really like the study for this class. AI was something I was sort of interested in but the study made me more invested in it. The AI bias study was not complex but very informative. I also have a better understanding of citations in APA format. I also like how Professor Stemberg was very passionate in teaching these topics. It made me more invested in the class. The class didn't have a cold atmosphere but a warm and welcoming one.

      Writing my lab reports and essays were easier to write thanks to the rubrics, templates, and planning stages. One thing I learned is how to cite and display images in my papers. I also have learned how to make my lab reports look more professional. Learning this is very helpful because I will be writing lab reports in my career in the future. Collaborating with my group members was also easy and effective. It made the research more clear and organized.

      Overall, during the whole class, I was never lost and had a clear understanding of the course. I thought that the new AI bias project was very fun and interesting. I would recommend doing it for future classes since it highlights a problem that we can fix in the future. This class has gotten me more interested in AI and AI studies. Overall, I would recommend this class and the content of it.
